## Data in Many Forms...

Statistics Canada disseminates data in a variety of forms. In addition to publications, both standard and special tabulations are offered on computer print-outs, microfiche and microfilm, and magnetic tapes. Maps and other geographic reference materials are available for some types of data. Direct access to aggregated information is possible through CANSIM, Statistics Canada's machine-readable data base and retrieval system.

## How to Obtain More Information

Inquiries about this publication and related statistics or services should be directed to:

Monthly Measures Section,  
Industry Measures and Analysis Division,

Statistics Canada, Ottawa, K1A 0T6 (Telephone: 951-9145) or to the Statistics Canada reference centre in:

St. John's	(772-4073)	Winnipeg	(983-4020)
Halifax	(426-5331)	Regina	(780-5405)
Montreal	(283-5725)	Edmonton	(495-3027)
Ottawa	(951-8116)	Calgary	(292-6717)
Toronto	(973-6586)	Vancouver	(666-3691)

Toll-free access is provided in all provinces and territories, **for users who reside outside the local dialing area** of any of the regional reference centres.

## Des données sous plusieurs formes...

Statistique Canada diffuse les données sous formes diverses. Outre les publications, des totalisations habituelles et spéciales sont offertes sur imprimés d'ordinateur, sur microfiches et microfilms et sur bandes magnétiques. Des cartes et d'autres documents de référence géographiques sont disponibles pour certaines sortes de données. L'accès direct à des données agrégées est possible par le truchement de CANSIM, la base de données ordiolingue et le système d'extraction de Statistique Canada.

## Comment obtenir d'autres renseignements

Toutes demandes de renseignements au sujet de cette publication ou de statistiques et services connexes doivent être adressées à:

Section des mesures mensuelles,  
Division des mesures et de l'analyse des industries,

Statistique Canada, Ottawa, K1A 0T6 (téléphone: 951-9145) ou au centre de consultation de Statistique Canada à:

St. John's	(772-4073)	Winnipeg	(983-4020)
Halifax	(426-5331)	Regina	(780-5405)

## Symbols

The following standard symbols are used in Statistics Canada publications:

- .. figures not available.
- ... figures not appropriate or not applicable.
- nil or zero.
- amount too small to be expressed.

### Note

Annual averages of seasonally adjusted data are identical to annual levels except for minor variations which are due to rounding.

### Codes

SNA Industry Code: a System of National Accounts industry code appearing in the tables should be interpreted as follows:

An S code corresponds more or less to a division code from the Standard Industrial Classification, broken down between the business and non-business sectors of the economy. For the business sector, the industry code goes from S01 to S13 and, for the non-business sector, it goes from S17 to S25.

An M code corresponds to a major group within a division.

An L code corresponds to the lowest level at which estimates of GDP for an industry or a group of industries can be linked across various industrial classifications.

Finally a W code corresponds to the most detailed level at which estimates of GDP by industry are prepared using a given SIC.

A detailed concordance between the SNA Industry Codes and the Standard Industrial Classification is available in the June issue of this publication (Cat. 15-001) every year.

### A Note on CANSIM®

All tabular data appearing in this publication, as well as many other data series, are available to the public from **CANSIM** via terminal, on computer printouts, or in machine readable form.

For further information write to **CANSIM**, Statistics Canada, Ottawa, K1A 0T6, or call (613)951-8200.

## Signes conventionnels

Les signes conventionnels suivants sont employés uniformément dans les publications de Statistique Canada:

- .. nombres indisponibles.
- ... n'ayant pas lieu de figurer.
- néant ou zéro.
- nombres infimes.

### Nota

La moyenne annuelle désaisonnalisée est identique au niveau annuel sauf pour des différences mineures dues à l'arrondissement.

### Codes

Codes des industries du SCN: le code des industries du Système de la comptabilité nationale figurant aux tableaux doit être interprété ainsi:

Un code S correspond plus ou moins au code d'une division de la classification type des industries, ventilée entre le secteur des entreprises et le secteur non commercial. Pour le secteur des entreprises, le code des industries va de S01 à S13 et, pour le secteur non commercial, il va de S17 à S25.

Un code M correspond au grand groupe à l'intérieur d'une division.

Un code L correspond au niveau le plus bas auquel les estimations du PIB pour une industrie ou un groupe d'industries peuvent être raccordées à travers diverses classifications d'industries.

Enfin, un code W représente le niveau le plus détaillé auquel les estimations du PIB par industrie sont préparées en utilisant une CTI donnée.

À chaque année, la livraison de juin de cette publication (portant le numéro de catalogue 15-001) contient une concordance détaillée entre les codes des industries du SCN et ceux de la classification type des industries.

### Note au sujet de CANSIM®

Toutes les données présentées dans cette publication et beaucoup d'autres données contenues dans le **CANSIM** peuvent être extraites par l'intermédiaire d'un terminal, sous forme d'imprimés d'ordinateur ou sous une forme lisible par la machine.

Pour plus de renseignement, écrivez à **CANSIM**, Statistique Canada, Ottawa, K1A 0T6, ou téléphonez à (613)951-8200.

## The System of National Accounts

In Canada, the National Accounts have been developed since the close of the Second World War in a series of publications relating to their constituent parts. These have now reached a stage of evolution where they can be termed a "System of National Accounts". For purposes of identification, all publications (containing tables of statistics, descriptions of conceptual frameworks and descriptions of sources and methods) which make up this System carry the term "System of National Accounts" as a general title.

The System of National Accounts in Canada consists of several parts. The annual and quarterly Income and Expenditure Accounts (included with Catalogue Nos. carrying the prefix 13) were, historically speaking, the first set of statistics to be referred to with the title "National Accounts" (National Accounts, Income and Expenditure). The Balance of International Payments data (Catalogue Nos. with prefix 67) are also part of the System of National Accounts and they, in fact, pre-date the Income and Expenditure Accounts.

Greatly expanded structural detail on industries and on goods and services is portrayed in the Input-Output Tables of the System (Catalogue Nos. with prefix 15). The Catalogue Nos. carrying the prefix 15 also provide measures of the contribution of each industry to total Gross Domestic Product at factor cost as well as Productivity Measures.

Both the Input-Output tables and the estimates of Gross Domestic Product by Industry use the establishment as the primary unit of industrial production. Measures of financial transactions are provided by the Financial Flow Accounts (Catalogue Nos. with prefix 13). Types of lenders and financial instruments are the primary detail in these statistics and the legal entity is the main unit of classification of transactors. Balance sheets of outstanding assets and liabilities are published annually.

The System of National Accounts provides an overall conceptually integrated framework in which the various parts can be considered as interrelated sub-systems. At present, direct comparisons amongst those parts which use the establishment as the basic unit and those which use the legal entity can be carried out only at highly aggregated levels of data. However, Statistics Canada is continuing research on enterprise company establishment relationships; it may eventually be feasible to reclassify the data which are on one basis (say the establishment basis) to correspond to the units employed on another (the company or the enterprise basis).

In its broad outline, the Canadian System of National Accounts bears a close relationship to the international standard as described in the United Nations publication: *A System of National Accounts* (Studies in Methods, Series F, No. 2 Rev. 3, Statistical Office, Department of Economic and Social Affairs, United Nations, New York, 1968).

## Le système de comptabilité nationale

Au Canada, les comptes nationaux ont fait l'objet depuis la fin de la Seconde Guerre mondiale de toute une série de publications portant sur leurs éléments constitutifs. Ils ont connu une telle évolution qu'on peut maintenant les qualifier de "Système de comptabilité nationale". Aux fins d'identification, toutes les publications qui font partie du système (elles contiennent des tableaux statistiques, la description du cadre théorique et l'explication des sources et des méthodes) portent le titre général de "Système de comptabilité nationale".

Le système de comptabilité nationale du Canada se divise en plusieurs catégories de comptes. Les comptes annuels et trimestriels des revenus et des dépenses (paraissant dans les publications dont le numéro de catalogue commence par 13) ont constitué le premier ensemble de statistiques à être connu sous le titre de "Comptes nationaux" (Comptes nationaux, revenus et dépenses). Les données sur la balance canadienne des paiements internationaux (numéro de catalogue commençant par 67) font également partie du système de comptabilité nationale; elles ont même existé avant les comptes des revenus et dépenses.

Une nomenclature beaucoup plus détaillée d'industries et de biens et services figure dans les tableaux d'entrées-sorties du système (numéro de catalogue commence par 15). Les publications dont le numéro de catalogue commence par 15 comprennent aussi les mesures de l'apport de chaque branche d'activité au total du produit intérieur brut au coût des facteurs ainsi que les mesures de productivité.

L'établissement est l'unité primaire de production industrielle tant dans les tableaux d'entrées-sorties que dans les estimations du produit intérieur brut par activité économique. Les comptes de flux financiers (publications dont le numéro de catalogue commence par 13) mesurent les opérations financières. Les catégories de prêteurs et d'instruments financiers forment les éléments de base de ces statistiques et la personne morale est le point de départ du classement des agents économiques. Les comptes du bilan des actifs et passifs en circulation sont disponibles annuellement.

Le système de comptabilité nationale constitue un ensemble conceptuellement intégré dans lequel les diverses catégories de comptes peuvent être considérées comme des sous-systèmes étroitement liés entre eux. Au stade actuel de développement, on ne peut faire de comparaison directe entre les éléments basés sur l'établissement et ceux qui sont basés sur l'entité juridique que lorsque les données sont groupées dans des catégories très générales. Toutefois, Statistique Canada poursuit ses recherches sur les relations entre l'entreprise, la société et l'établissement. Il sera peut-être possible un jour de reclasser les données établies sur une certaine base (l'établissement par exemple) de manière à les faire correspondre aux données établies sur une autre base (société ou entreprise).

Dans ses grandes lignes, le système de comptabilité nationale du Canada suit de très près la norme internationale exposée dans la publication des Nations Unies intitulée *Système de comptabilité nationale* (Études méthodologiques, série F, n° 2, rév. 3, Bureau de statistique, Département des affaires économiques et sociales, Nations Unies, New York, 1970).

# Historical Revision of Monthly Estimates of GDP at Factor Cost, By Industry

## Introduction

At the end of August, when monthly Gross Domestic Product by industry was released for June 1990, valuation of the estimates was changed from 1981 prices to 1986 prices. The valuation at 1986 prices was worked back to January 1986, and the historical record from then to June 1990 was published in the June 1990 issue of 15-001. Data prior to 1986 was linked to these rebased estimates, and the historical record from January 1961 to December 1985 was released on CANSIM. This publication provides data covering the January 1961 to December 1985 period in hardcopy form.

In addition this publication provides useful background information on the monthly estimates of GDP by industry. Particularly relevant to the data in this publication is the discussion in section 7.3 on linking the estimates from January 1961 to December 1985 to those from January 1986 forwards.

## 1. Real Gross Domestic Product by Industry at Factor Cost

### Definition

**Gross Domestic Product by industry at factor cost** is a measure of the economic production which takes place within the geographical boundaries of Canada. As the name suggests, it is designed to display the industrial distribution of total output. GDP for a single industry is also referred to as net output, or value added. Conceptually it is equal to total sales by the industry (gross output) less inputs of goods and services that were provided by sources other than the industry itself (intermediate inputs). GDP for the economy as a whole is the sum of net output, or value added, for all industries. Summing net rather than gross outputs avoids

# Révisions historiques des estimations mensuelles du PIB par industrie au coût des facteurs

## Introduction

A la fin août, lors de la parution des chiffres du Produit intérieur brut par industrie portant sur le mois de juin 1990, l'évaluation des estimations fut modifiée de façon à exprimer ces dernières aux prix de 1986 plutôt qu'à ceux de 1981. L'évaluation aux prix de 1986 a été effectuée rétroactivement jusqu'en janvier 1986 et les données historiques pour la période de janvier 1986 à juin 1990 ont été publiées dans le numéro de juin 1990 de la publication 15-001. Les données antérieures à 1986 ont été raccordées aux estimations associées à la nouvelle année de base et les données historiques pour la période de janvier 1961 à décembre 1985 ont été diffusées sur CANSIM. Cette publication renferme les données pour la période de janvier 1961 à décembre 1985 sous forme d'imprimé.

De plus cette publication fournit une information complémentaire aux estimations mensuelles du PIB par industrie. La discussion à la section 7.3 entourant le raccordement des estimations de janvier 1961 à décembre 1985 aux estimations à compter de janvier 1986 revêt une importance spéciale pour la compréhension des données contenues dans cette publication.

## 1. Produit intérieur brut réel par industrie au coût des facteurs

### Définition

Le **produit intérieur brut par industrie au coût des facteurs** mesure la production économique accomplie à l'intérieur des frontières géographiques canadiennes. Comme son nom le suggère, il a pour objectif de présenter la distribution industrielle de l'ensemble de la production. On se représente le PIB d'une industrie particulière comme sa production nette ou sa valeur ajoutée. Conceptuellement, il est égal à la somme des ventes pour une industrie (production brute) moins la consommation intermédiaire de biens et de services fournis par des agents autres que l'industrie elle-même (consommation intermédiaire). Le PIB pour l'ensemble de l'économie représente la somme des

doublecounting the output of one industry which is an intermediate input to another.

The term "gross" in Gross Domestic Product means that capital consumption costs, that is the costs associated with the depletion of capital assets (buildings, machinery and equipment), have not been netted out. The expression "at factor cost" means that production is valued at the cost of factors such as labour and capital and excludes indirect taxes but includes subsidies.

"Real" means that the estimates are valued at the prices that prevailed in some base year rather than at current prices. As a result the estimates of value added by industry will reflect real production, and will not reflect changes that are simply due to price fluctuations.

## **2. Differences Between Industry-Based and Expenditure-Based GDP**

### **2.1 Differences in Objectives**

The Canadian System of National Accounts publishes two important constant dollar subannual measures of Gross Domestic Product: (1) monthly industry-based GDP and (2) quarterly expenditure-based GDP. Both are designed to measure total production in Canada, but serve different analytical purposes. GDP by industry provides information about the sources of output, while the expenditure-based GDP shows the disposition of output among the various categories of demand. The two series yield similar results, but because of conceptual, statistical and methodological differences, they are not identical.

### **2.2 Factor Cost Versus Market Price Valuation**

Because expenditure-based GDP is viewed from the perspective of purchasers, the analysis is concerned with demand categories such as personal expenditure, government expenditure, exports and imports, and capital formation.

productions nettes ou des valeurs ajoutées pour toutes les industries. Faire la somme des productions nettes plutôt que celle des productions brutes évite de prendre en compte plus d'une fois la production d'une industrie qui sert de consommation intermédiaire pour une autre.

Le mot "brut" dans produit intérieur brut signifie que les provisions pour consommation de capital, à savoir les coûts associés avec l'usure d'actifs de capital (bâtiments, machines et matériel) ne sont pas déduites. L'expression "au coût des facteurs" signifie qu'on évalue la production au coût des facteurs de production comme le travail et le capital et qu'on ne tient pas compte des impôts indirects mais comprend les subventions.

"Réal" signifie que les estimations sont évaluées aux prix prévalant durant une certaine année de référence au lieu des prix nominaux. En conséquence, les estimations de la valeur ajoutée par industrie vont refléter la production réelle et non pas simplement des variations causées par les fluctuations de prix.

## **2. Différences entre le PIB selon l'industrie et les dépenses**

### **2.1 Différences dans les objectifs**

Le Système canadien de la comptabilité nationale publie deux mesures importantes infraannuelles en prix constants du produit intérieur brut: (1) le PIB mensuel par industrie et (2) le PIB trimestriel en termes de dépenses. Les deux sont conçues en vue de mesurer la production totale canadienne, mais ont des visées analytiques différentes. Le PIB par industrie fournit des renseignements sur les sources de la production, tandis que le PIB en termes de dépenses présente l'écoulement de la production parmi les différentes catégories de la demande. Les deux séries chronologiques présentent des résultats similaires, mais elles ne sont pas identiques, en raison des différences conceptuelles, statistiques et méthodologiques.

### **2.2 Évaluation au coût des facteurs versus aux prix de marché**

Parce que le PIB, considéré en termes de dépenses, reflète l'activité des acheteurs, l'analyse se concentre sur les éléments constitutifs de la demande globale: les dépenses à la consommation, les dépenses gouvernementales, les exportations et

Expenditure-based GDP is valued at market prices which reflect what purchasers actually pay for the goods and services. Market price valuation includes indirect taxes such as sales and excise taxes, licences, property taxes, etc., and excludes subsidies.

When the output of goods and services is looked at in terms of the industries which produce them, valuation is confined to the costs incurred in producing the products. Various taxes collected when these goods and services are sold (indirect taxes) are excluded, while government subsidies are included. Indirect taxes fall much heavier on some products (for example liquor or tobacco) than on others, and consequently the contribution of specific industries to total GDP is more accurate if such taxes are excluded. GDP by industry is therefore estimated on a factor cost basis.

## 2.3 Statistical Differences

Whether GDP is calculated by the industry or the expenditure approach, the two totals should in principle differ only by net indirect taxes, (indirect taxes less subsidies). In fact there are some statistical discrepancies as well. The monthly industry and the quarterly expenditure-based GDP are built up somewhat independently. Various data sources are weighted differently and different estimation methods are used. For example, the industry-based estimates do not rely on data for exports but do use data on manufacturers' shipments. The expenditure-based estimates use exports but not shipments. Since exports by manufacturers must have been shipped, both systems will reflect the same underlying activity. Since they do so via different statistical vehicles, however, there will be statistical differences between the two systems.

## 3. Methodological Overview of GDP by Industry

### 3.1 Annual Benchmarks

For all but the most recent two years, the annual estimates of Gross Domestic Product by industry are derived within the framework of the

importations, et les dépenses d'investissement. Le PIB exprimé en termes de dépenses est évalué aux prix de marché, soit les prix de vente taxe comprise, ce qui comprend les impôts indirects comme les taxes de vente, les taxes d'accise, les licences, les impôts fonciers, etc et exclut les subventions.

Quand on regarde la production de biens et services en termes d'industries productrices, l'évaluation qui en est faite se limite aux frais encourus dans la création de produits. Diverses taxes perçues quand ces biens et services sont vendus (impôts indirects) sont exclues et les subventions gouvernementales sont incluses. Les impôts indirects frappent plus lourdement certains produits que d'autres (par exemple, les boissons alcooliques et le tabac) et, par conséquent, la contribution d'industries particulières au total du PIB est plus exacte si on exclut de tels impôts. Ainsi donc, on mesure le PIB par industrie en termes de coûts des facteurs.

## 2.3 Différences statistiques

Que l'on calcule le PIB par industrie ou en termes de dépenses, en principe, les deux totaux ne devraient différer que par les impôts indirects nets, (impôts indirects moins les subventions) mais, en fait, il y a aussi des divergences statistiques. On prépare les estimations mensuelles du PIB par industrie et les estimations trimestrielles du PIB en termes de dépenses de façon quelque peu séparée; des données de source différente reçoivent une pondération différente et l'on utilise des méthodes distinctes d'estimation. Par exemple les estimations par industrie ne dépendent pas des données des exportations, mais on les obtient à partir des données des livraisons des manufacturiers. Les estimations en termes de dépenses font usage des exportations mais non des livraisons. Puisque les exportations par les fabricants sont expédiées, les deux systèmes vont refléter la même activité sous-jacente. Étant donné le fait qu'ils le font à partir de véhicules statistiques distincts, toutefois il y aura différences statistiques entre les deux systèmes.

## 3. Aperçu méthodologique du PIB par industrie

### 3.1 Jalons annuels

Pour toutes les années, sauf pour les deux plus récentes, on obtient les estimations annuelles du produit intérieur brut par industrie à partir du cadre

Input-Output accounts by subtracting the intermediate input from the gross output for each industry. The data sources are typically annual surveys or censuses. For the two most recent years and part of the current year GDP is estimated using the monthly methodology described below.

### 3.2 Monthly Estimates

While monthly information on inputs and outputs is more timely, it is not as complete as annual information. As a result, the monthly values of GDP by industry are projections, estimated using proxy indicators such as gross output or an input such as employment, usually obtained from monthly surveys. The assumption inherent in the monthly projector system is that technology changes so slowly that as an approximation, it can be regarded as constant over short spans of time. The direct expression of this assumption is that the ratio of inputs to output remains relatively unchanged, and therefore changes in GDP can be approximated by the changes in either gross output or in inputs. Because this assumption is based on the notion that technology does not change rapidly, it is more useful for projecting GDP over short time spans than over long.

### 4. Classification

Estimates of value added are classified both by industry and by business and non-business sectors. Those establishments in industries which produce goods and services to generate profit are allocated to the business sector, others are assigned to the non-business sector. In most industries all establishments belong to one sector or the other. However a few have establishments in both sectors, for example, radio and television broadcasting, education, hospitals, etc..

An industrial classification framework referred to as the System of National Accounts (SNA) industry codes is used to define the industries for

des comptes des entrées-sorties en soustrayant la consommation intermédiaire de la production brute de chaque industrie. L'ensemble des données de sources provient d'enquêtes ou de recensements annuels. Pour les deux années les plus récentes et une partie de l'année en cours, on prépare les estimations du PIB à partir de la méthodologie mensuelle décrite ci-après.

### 3.2 Estimations mensuelles

L'information mensuelle sur les intrants et les extrants, bien que plus à propos, n'est pas aussi détaillée que cette même information sur une base annuelle. Conséquemment, les valeurs mensuelles du PIB par industrie font l'objet d'une estimation à partir d'indicateurs connexes comme la production brute ou à l'aide d'un intrant tel l'emploi, généralement disponibles à partir d'enquêtes mensuelles. L'hypothèse inhérente dans le système d'indicateurs mensuels repose sur le fait que la technologie évolue si lentement que, à toutes fins utiles, on peut la considérer comme constante sur de courtes périodes. L'expression directe de cette hypothèse consiste en ce que le rapport intrants/production demeure relativement stable et qu'on peut représenter de façon rapprochée une variation du PIB selon les changements survenus dans les termes de ce rapport. Puisque cette hypothèse provient de la notion que la technologie évolue lentement, elle est plus utile pour supporter les estimations du PIB sur de courtes périodes de temps plutôt qu'à long terme.

### 4. Classification

Les estimations de la valeur ajoutée sont classées à la fois selon l'industrie et selon la distinction entre le secteur des entreprises et le secteur non commercial. Les établissements au sein des industries qui produisent des biens et des services dans le but de réaliser un profit se retrouvent dans le secteur des entreprises; les autres vont dans le secteur non commercial. Pour la plupart des industries les établissements membres appartiennent en exclusivité soit au secteur des entreprises ou au secteur non commercial; toutefois, il y en a quelques unes qui ont des établissements dans les deux secteurs comme la télédiffusion, l'enseignement, les hôpitaux, etc.

Le cadre de classification des industries, soit les codes des industries du Système de la comptabilité nationale (SCN), est utilisé pour définir les industries

which GDP estimates are compiled. This framework is supplementary to the industry definitions provided by the Standard Industry Classifications (SIC's) of 1960, 1970, and 1980 (see Appendix I). It provides more industry definitions that are relatively stable over time than do the three SIC's collectively. There are four levels of hierarchy in the SNA industry codes. They are referred to as the small (S), medium (M), link or large (L), and worksheet (W) levels. S is the highest level in the hierarchy followed by the M, L and W levels. As with all hierarchies the S level has a smaller number of categories than the moderate number in the M level, which in turn has fewer than the large number in the L level. The W level has the greatest number of categories.

The L level is also referred to as the link level because it is the lowest level of aggregation for which industry definitions are relatively stable across the three SIC's. Of course S and M level definitions are also stable over time. In constructing the industry definitions at the L level certain quantitative criteria were used in order to determine continuity. The SNA industry codes were built from the various SIC industry definitions, and when a new SIC was introduced establishments were reclassified from one industry to another. If the value added for an industry changed too much on account of this reclassification, the value added series for that industry was not considered to be a continuous time series. Near equality of value added, however, was not a sufficient criterion. The value added of incoming establishments could be large and nearly equal to the value added of outgoing establishments. In this case the composition of the industry would have changed substantially while total value added changed only marginally. As a result, a second criterion was also employed to define continuity: the value added of incoming plus outgoing establishments had to be small relative to total value added before reclassification.

GDP estimates are compiled directly from the source data at the W (worksheet) level, and are aggregated to provide estimates for the higher

et leurs agrégats pour lesquels on prépare des estimations du PIB. Ce cadre est un ajout aux définitions des classifications types des industries (CTI) de 1960, 1970 et 1980 (voir Appendice I). Il fournit plus de définitions d'industries pour lesquelles on retrouve relativement une plus grande continuité dans le temps que pour les trois CTI prises ensemble. Il y a quatre niveaux dans la structure des codes des industries du SCN: le niveau d'agrégation petit (S), le niveau d'agrégation moyen (M), le niveau d'agrégation commun (L) et le niveau de travail (W). S est le niveau le plus élevé dans la hiérarchie, suivi par les niveaux M, L et W. Ainsi donc, le niveau S a moins de catégories que le niveau moyen M, qui lui en a moins que le niveau commun L. Le niveau W a le plus grand nombre de catégories.

On se réfère au niveau L comme étant le niveau commun parce qu'il représente le niveau le plus bas d'agrégation pour lequel les définitions des industries demeurent relativement stables pour les trois CTI. Bien entendu, les définitions aux niveaux S et M demeurent stables elles aussi. En établissant les définitions d'industries au niveau L, on a utilisé certains critères quantitatifs en vue de déterminer une continuité. Les codes des industries du SCN ont été bâtis à partir des définitions des diverses CTI des industries; lorsqu'on introduisait une nouvelle CTI, des établissements faisaient l'objet d'une reclassification d'une industrie à une autre. Si la valeur ajoutée pour une industrie fluctue beaucoup trop en raison de cette reclassification, on ne considère plus la série de la valeur ajoutée pour cette industrie comme une série chronologique continue. Cependant, une presque égalité des valeurs ajoutées n'est pas un critère suffisant. La valeur ajoutée des établissements reclassifiés à l'industrie peut être importante et presque au point d'égaliser la valeur ajoutée des établissements qui se trouvent reclassifiés dans d'autres industries. Dans ce cas, la structure de l'industrie a changé de façon significative bien que la valeur ajoutée n'ait varié que légèrement. Pour identifier la continuité, il nous faut donc utiliser un deuxième critère: la somme de la valeur ajoutée des établissements reclassifiés à l'intérieur de l'industrie et celle de ceux reclassifiés à l'extérieur de cette même industrie doit être relativement petite en comparaison de la valeur ajoutée totale avant reclassification.

On calcule les estimations du PIB directement à partir des données de source au niveau de travail W et on les agrège pour obtenir les estimations aux

levels. Most W levels correspond to four digit industries in the 1980 SIC, but a few correspond to three, two, and occasionally even to one digit industries. Most W levels are continuous across the different SIC's and are therefore L levels themselves. If there is a break in the W level from one SIC to another, however, a higher level of industry aggregation has to serve as the link level.

GDP estimates for most S, M, and L levels are provided in this publication. In general they correspond to the one, two, and three digit industries in the various SIC's. The W level series do not appear in this publication but are available on request.

To monitor certain combinations of industries, for example industrial production, goods, services, durables, non-durables, etc., some special aggregations are also published. These are referred to as the G level.

## 5. Dissemination Vehicles

### 5.1 The Daily/CANSIM

As with many Statistics Canada series the monthly estimates of GDP are officially released to the public simultaneously through **The Daily**, Statistics Canada, Catalogue 11-001 and CANSIM. The estimates are published approximately 60 days after the end of the reference month, and for the next few months are scheduled for release at 8:30 AM, Eastern Time on the following dates:

Data for:	Release date:
October 1990	December 28, 1990
November 1990	January 31, 1991
December 1990	February 28, 1991

Release dates for 1991 will be published, along with those for other major economic indicators, in late December. A brochure containing these dates will be available from Communications Division, Statistics Canada (613) 951-4636, or from any of Statistics Canada's regional offices.

niveaux plus élevés. La plupart des codes des industries au niveau W correspondent aux codes de quatre chiffres des industries de la CTI de 1980, mais quelques unes correspondent à trois chiffres, deux chiffres, et à l'occasion, même à un chiffre. La plupart des industries de niveau W font l'objet d'une continuité à travers les différentes CTI et se retrouvent au niveau L tels quels. S'il y a une discontinuité au niveau W en passant d'une CTI à une autre, un niveau plus élevé d'agrégation d'industries doit servir comme niveau commun.

Les estimations du PIB pour presque tous les niveaux S, M et L se retrouvent dans cette publication. En général, elles correspondent aux codes à un chiffre, deux chiffres, ou trois chiffres des industries des diverses CTI. Les séries chronologiques au niveau W ne font pas partie de cette publication mais sont disponibles sur demande.

Afin d'observer certains regroupements d'industries comme la production industrielle, les industries de biens, les industries de services, la fabrication de biens durables, celle de biens non durables, etc., on publie certains groupes spéciaux d'industries. On y réfère comme étant au niveau G.

## 5. Outils de diffusion

### 5.1 Le Quotidien/CANSIM

Comme beaucoup de séries chronologiques à Statistique Canada, les estimations mensuelles du PIB font l'objet d'une diffusion officielle au public simultanément dans **le Quotidien**, Statistique Canada, no 11-001 au catalogue et dans CANSIM. Ces estimations sont publiées approximativement 60 jours après la fin du mois de référence et, pour les prochains mois, seront diffusées à 8h30, heure de l'est aux dates suivantes:

Données pour:	Date de diffusion:
Octobre 1990	28 décembre 1990
Novembre 1990	31 janvier 1991
Décembre 1990	28 février 1991

Les dates de diffusion pour 1991 ainsi que celles des autres indicateurs économiques importants seront publiées tard en décembre. Un calendrier contenant ces dates sera disponible auprès de la Division des communications de Statistique Canada au numéro (613) 951-4636 ou auprès de n'importe quel bureau régional de Statistique Canada.

The data on CANSIM appear in greater industrial detail than in the Daily and are also in seasonally unadjusted form. They are available historically from January 1961, and may be retrieved from the following matrices (see Appendix II):

Data	Matrix Number
Annual	4670
Quarterly seasonally adjusted	4671
Quarterly without seasonal adjustment	4672
Monthly seasonally adjusted	4673
Monthly without seasonal adjustment	4674

Information can also be obtained by calling any Statistics Canada regional office or the Industry Measures and Analysis Division (613) 951-9161.

### 5.2 Publications

The monthly, quarterly and annual estimates of Gross Domestic Product by industry in 1986 prices are published in **Gross Domestic Product by Industry**, Statistics Canada, Catalogue 15-001, available approximately 5 working days after the data have been released. This publication contains seasonally adjusted data for the current year and the previous year, except for the June issue which contains data covering several of the most recent years. Not all industry detail is included, but can be obtained on request. Appendix I of this issue provides a complete list of industries, published and unpublished, for which estimates of GDP are prepared.

Annual estimates of Gross Domestic Product by industry in current prices are published in **The Input-Output Structure of the Canadian Economy**, Catalogue 15-201. Annual estimates at constant prices appear in **The Input-Output Structure of the Canadian Economy in Constant Prices**, Catalogue 15-202. These publications become available approximately 3 years after the reference period. Other related Statistics Canada publications which contain useful descriptions of concepts, definitions, sources and methods are: **Gross Domestic Product by Industry**, Catalogue 61-213, Annual, **Revised Index of Industrial Production**,

Les estimations diffusées sur CANSIM sont beaucoup plus détaillées que celles figurant dans le Quotidien; de plus, elles sont également disponibles sous forme non désaisonnalisée. On peut les obtenir à partir de janvier 1961 des matrices suivantes (voir Appendice II):

Données	Numéro de matrice
Annuelles	4670
Trimestrielles désaisonnalisées	4671
Trimestrielles non désaisonnalisées	4672
Mensuelles désaisonnalisées	4673
Mensuelles non désaisonnalisées	4674

Vous pouvez obtenir plus de renseignements en communiquant avec n'importe quel bureau régional de Statistique Canada ou en téléphonant à la Division des mesures et de l'analyse des industries au numéro (613) 951-9161.

### 5.2 Publications

Les estimations mensuelles, trimestrielles et annuelles du produit intérieur brut par industrie aux prix de 1986 sont publiées dans **Produit intérieur brut par industrie**, Statistique Canada, no 15-001 au catalogue, qui est disponible environ cinq jours ouvrables après la diffusion initiale des données. Cette publication contient les données désaisonnalisées pour l'année en cours et l'année précédente, sauf dans le cas de la livraison de juin qui contient des données pour plusieurs des années les plus récentes. Elle ne contient pas les estimations de toutes les industries; celles-ci sont disponibles sur demande. L'appendice I de cette livraison fournit une liste complète de toutes les industries pour lesquelles on prépare des estimations publiées ou non.

Les estimations annuelles du produit intérieur brut par industrie en prix courants sont publiées dans **La structure par entrées-sorties de l'économie canadienne**, Statistique Canada, no 15-201 au catalogue. Les estimations annuelles en prix constants se retrouvent dans **La structure par entrées-sorties de l'économie canadienne en prix constants**, no 15-202 au catalogue. Ces publications sont disponibles environ trois ans après la période de référence. Plusieurs publications connexes de Statistique Canada fournissent un nombre de descriptions utiles sur les concepts, les définitions, les sources et les méthodes, soit: **Produit intérieur brut par industrie**, no 61-213 au catalogue, annuel,

(1949=100), 1935-1957, Catalogue 61-502, Occasional, **Indexes of Real Domestic Product by Industry, 1935-1961**, Catalogue 61-505, Occasional, **Indexes of Real Domestic Product, 1969**, Catalogue 61-510, and **Real Domestic Product by Industry, 1961-1971**, Catalogue 61-516.

## 6. Revision Policy

### 6.1 Monthly Revisions

When estimates of GDP by industry are prepared for a new month, the three preceding months are revised. The two main reasons for these regular monthly revisions are data updates due to a more complete response to surveys, and new seasonal factors. Seasonally adjusted estimates are less reliable for data points near the ends of a time series than for those in the interior. Therefore as time passes and a given month works its way back into the interior of a time series, its seasonally adjusted value is revised to produce a more reliable estimate.

This four-month update period (the current and preceding three months) is maintained throughout the calendar year for all industries except construction and agriculture. These two industries undergo additional revisions due to the nature of the underlying data. The estimates for construction incorporate quarterly estimates of capital formation, and are revised back to January at the end of each quarter. Starting with August, the monthly estimates for agriculture may be revised back to January to incorporate new crop estimates.

For all industries, there are two months in the year when the update period differs from the normal four-month span: the months of December when end of year revisions are done, and June when annual benchmarks are incorporated.

**Indice de production industrielle révisé, (1949=100), 1935-1957**, no 61-502 au catalogue, occasionnel, **Indices du produit intérieur brut réel par industrie, 1935-1961**, no 61-505 au catalogue, occasionnel, **Indices du produit intérieur réel, 1969**, no 61-510 au catalogue, et **Produit intérieur réel par industrie, 1961-1971**, no 61-516 au catalogue.

## 6. Politique de révision

### 6.1 Révisions mensuelles

Lors de la préparation des estimations mensuelles du PIB pour un nouveau mois, les trois mois précédents font l'objet d'une révision. Les deux motifs principaux quant à ces révisions régulières sont la mise à jour des données de source, occasionnée par des taux de réponse plus élevés aux enquêtes et de nouveaux facteurs saisonniers. Les estimations désaisonnalisées sont moins fiables pour les observations en début et en fin de série que pour ceux plus au centre. Ainsi, à mesure que le temps passe et qu'un mois donné poursuit sa route vers l'intérieur d'une série chronologique, sa valeur désaisonnalisée fait l'objet de révision en vue de produire une estimation plus fiable.

Cette période de quatre mois de mise à jour (le mois courant et les trois mois précédents) se poursuit tout au long de l'année civile pour toutes les industries à l'exception de la construction et de l'agriculture. Ces deux industries font l'objet de révisions supplémentaires en raison de la nature de leurs données sous-jacentes. Les estimations pour la construction incorporent les estimations trimestrielles de la formation de capital et font l'objet d'une révision rétroactive jusqu'en janvier à la fin de chaque trimestre. À partir d'août, les estimations mensuelles pour l'industrie agricole sont sujettes à révision rétroactive jusqu'en janvier pour incorporer les estimations portant sur les nouvelles récoltes.

Pour toutes les industries, il y a deux mois dans l'année où les périodes de mises à jour diffèrent de la période normale de quatre mois: les mois de décembre lorsqu'on procède aux révisions de fin d'année, et de juin lorsqu'on incorpore les jalons annuels.

## 6.2 End-of-Year Revision

With the month of December the revisions for all industries go back to January of the current year. The reasons for this revision are the same as for revising on a regular monthly basis, but this revision reaches back to January because with the closing of the calendar year, changes to both the source data and the seasonal factors tend to be significant and affect the entire year.

## 6.3 Annual Revisions

Each year, when the estimates for June are prepared, the data are revised for the last several years. In addition to the previously described reasons for revisions, the annual revisions also reflect:

- \* the incorporation of the latest annual benchmark levels
- \* the incorporation of revisions to monthly source data that have not been picked up in the regular monthly revision cycle
- \* updated estimation of the trading-day effect whenever trading-day variation is present in a series
- \* the selection of new ARIMA (Autoregressive Integrated Moving Average) models for the seasonal adjustment procedure
- \* the implementation of new or improved methods for estimating monthly GDP for specific industries.

These are the normal reasons for the annual revisions. Occasionally these annual revisions also reflect rebasing and the implementation of a new industrial classification.

In order to ensure that users are advised on the scope of the revisions, each publication carries a note immediately following the table of contents, which specifies the revision span for the newly released data.

## 6.2 Révision de fin d'année

Avec le mois de décembre, toutes les industries font l'objet d'une révision rétroactive jusqu'en janvier de l'année en cours. Les raisons de cette révision sont les mêmes que pour celles des autres mois; celle-ci toutefois retourne en janvier parce qu'avec la fin de l'année civile des changements tant aux données de source qu'aux facteurs saisonniers tendent à prendre plus d'importance et à affecter l'année dans son ensemble.

## 6.3 Révisions annuelles

Chaque année, lors de la préparation des estimations de juin, les données font l'objet d'une révision pour les années les plus récentes. En plus des raisons pour révision décrites antérieurement, ces révisions annuelles reflètent également:

- \* l'incorporation des jalons annuels les plus récents
- \* l'incorporation de révisions aux données de source non prises en compte lors du cycle régulier de révisions mensuelles
- \* mise à jour des estimations de l'effet des jours ouvrables là où une variation de jours ouvrables est présente dans la série chronologique
- \* le choix de nouveaux modèles ARMMI (modèles autorégressifs et à moyennes mobiles intégrées) pour le programme de désaisonnalisation
- \* la mise en place de nouvelles méthodologies ou d'améliorations aux méthodologies utilisées pour préparer les estimations mensuelles du PIB pour des industries choisies.

Ce sont là les raisons habituelles pour effectuer ces révisions annuelles. A l'occasion, ces révisions reflètent aussi l'établissement d'une nouvelle année de base ou d'une nouvelle classification des industries.

Afin d'avertir les utilisateurs de l'étendue des révisions, chaque livraison contient une note qui suit immédiatement la table des matières; elle indique la période de révision accompagnant ces nouvelles données publiées.

## 7. The Annual Revision - June 1990

The June 1990 revision included the usual sources of annual changes, such as incorporation of revised source data, benchmarking and updated trading-day and seasonal factors. As well and special to this June's 1990 annual revision is the adoption of 1986 as a new base year.

### 7.1 Benchmarking

Since the monthly estimates are projections, they are adjusted to sum to the annual benchmark levels once these become available. This adjustment is based on a quadratic minimization technique<sup>1</sup> which preserves the month-to-month movements in the original series as much as possible, subject to the constraint that the monthly estimates sum to the annual benchmarks.

Benchmarking is performed once a year and the benchmarked estimates are released along with data for the month of June. Each year a new preliminary annual benchmark is provided by the Input-Output Division, and the benchmark for the preceding year is finalized. With the June 1990 estimates, preliminary 1987 and revised 1986 benchmarks were incorporated into the monthly estimates of GDP.

### 7.2 Trading-Day and Seasonal Adjustment

In many monthly economic time series a significant portion of the monthly growth rate is associated with differences in the composition of calendar months. For example, the volume of production usually varies with the different days of the week, and since consecutive months contain different combinations of days, a significant portion of the month-to-month changes may be caused strictly by the calendar. To give a more precise idea of economic developments the calendar months are put on an equalized basis. This is done by applying a smoothing procedure, known as trading-day adjustment<sup>2</sup>. Trading-day adjustment alters the distribution of monthly output to reflect changes in production that would

## 7. La révision annuelle - juin 1990

La révision pour le mois de juin 1990 incorpore les sources habituelles de changements annuels comme l'incorporation de révisions aux données de source, les jalons annuels, la mise à jour des facteurs d'ajustement pour les jours ouvrables et les facteurs saisonniers. Plus spécifiquement à la révision annuelle de juin 1990, on adopte alors l'année 1986 comme nouvelle année de base.

### 7.1 Étalonnage

Puisque les estimations mensuelles ne sont que des approximations, elles font l'objet d'un ajustement tel que leur somme annuelle correspond aux jalons annuels lorsqu'ils deviennent disponibles. Cet ajustement se fonde sur une technique de minimisation quadratique des différences<sup>1</sup>, qui garde les variations mensuelles dans les séries d'origine autant que possible, sujet à la contrainte que la somme des estimations mensuelles soit égale aux jalons annuels.

On exécute l'égalonnage une fois par année et les estimations ainsi égalonnées paraissent conjointement avec les données portant sur le mois de juin. Chaque année, la division des entrées-sorties fournit un nouveau jalon annuel préliminaire tandis que celui de l'année précédente fait l'objet d'une révision finale. Avec les estimations de juin 1990, les jalons préliminaires pour 1987 et révisés pour 1986 font l'objet d'une incorporation aux estimations mensuelles du PIB.

### 7.2 Ajustement pour les jours ouvrables et la désaisonnalisation

Pour plusieurs séries chronologiques économiques, une portion importante du taux de croissance mensuel se trouve liée avec les différences dans la composition des mois du calendrier. Par exemple, le volume de la production fluctue avec les différents jours de la semaine et, puisque des mois consécutifs contiennent une combinaison différente des jours, il s'ensuit qu'une portion importante de la variation mensuelle peut résulter uniquement du calendrier. Dans le but de donner une idée plus précise des développements économiques, on égalise chaque mois du calendrier. On procède en appliquant une technique de lissage, connue sous le nom d'ajustement pour les jours ouvrables<sup>2</sup>. L'ajustement pour les jours ouvrables

occur if all months contained the same number and type of days. The estimation of the trading-day effect is done once a year with the month of June.

To aid the interpretation of economic developments, the estimates of GDP by industry are also seasonally adjusted. Seasonal adjustment removes changes caused by repetitive climatic or institutional events, thereby making the underlying activity more apparent. Although the seasonal component is estimated with each new month, special with the month of June is the review and if appropriate, the updating of ARIMA models for each industry. The updated ARIMA models are held constant and used in the concurrent seasonal adjustment procedure throughout the next twelve months.

### 7.3 Rebasing

In order to analyze the behaviour of GDP independently of the influence of price changes, GDP is calculated for each industry in constant prices. Constant price measures provide information about changes in production independent of changes in prices. Such series are calculated by choosing a reference period in the past, called the base year, and valuing current production of goods and services in the prices of that year.

The selection of the base year can have significant consequences since different base years may yield different growth rates in total GDP and other aggregates. Consider an industry whose output price has declined, relative to that of other industries, between two years. The contribution of this industry to total output will be larger when valued in prices of the earlier period since the relative price was larger in that period, and movements in the industry's output will have more impact on movements in total output. If the industry is growing faster than average, valuing output in prices of the earlier period will result in a total GDP measure that grows faster than it

modifie la distribution de la production mensuelle de façon à refléter les changements de production qui seraient survenus si tous les mois contenaient le même nombre et le même type de jours. L'estimation de l'effet des jours ouvrables est fait une fois par année avec les données de juin.

Afin de faciliter l'interprétation des développements économiques, les estimations du PIB par industrie sont aussi désaisonnalisées. L'ajustement saisonnier supprime les changements causés par des événements répétitifs climatiques ou institutionnels, permettant ainsi de dégager plus facilement l'activité sous-jacente. Bien que la composante saisonnière fasse l'objet d'une estimation avec chaque nouveau mois, au mois de juin on revoit et met à jour si nécessaire les modèles ARMMI pour chaque industrie. On garde les modèles ARMMI mis à jour constants et on s'en sert dans la procédure simultanée de désaisonnalisation mensuelle pour les douze prochains mois.

### 7.3 Changement de l'année de base

Afin d'analyser le comportement du PIB en excluant l'influence des variations de prix, on calcule le PIB pour chaque industrie en prix constants. En gros, les mesures en prix constants fournissent des renseignements sur les changements survenus dans la production, par opposition aux changements dans les prix. On calcule de telles séries en choisissant une période de référence dans le passé, appelée année de base et en évaluant la production courante de biens et services aux prix de l'année de base.

Le choix d'une année de base peut avoir des conséquences importantes, puisque le choix de différentes années de base peut résulter en différents taux de croissance pour l'ensemble du PIB et des autres agrégats. Prenons une industrie dont les prix des produits ont diminué entre deux années par rapport aux prix des autres industries. La contribution de cette industrie à l'ensemble de la production sera plus importante si la production est évaluée en prix de la période précédente en raison de son prix relatif plus grand dans cette période, et les fluctuations dans la production de cette industrie auront plus d'impact sur les variations de la production totale. Si cette industrie croît plus vite

would were output valued in prices of the later period.

A notable example is the computer industry, in which soaring output and accelerating quality changes were combined with rapidly falling prices during the 1980's. In 1981, the computer industry comprised a mere 0.2% of total GDP and this proportion remained relatively stable in current prices between 1981 and 1986. However, when production is valued in 1981 prices, the industry's contribution to total real GDP rises to 0.7% by 1986. This means that changes in current price output are magnified through deflation, giving enhanced importance to the computer industry in the constant price series.

Ideally the base year is a typical year, followed by a number of years in which the relative prices of commodities remain stable. In a dynamic economy, however, relative prices constantly shift due to such factors as uneven technological developments in different industries, variations in productivity, shifts in consumer demand, cycles in economic growth and so on. The more remote a base year is in the past, the more today's relative prices will have changed compared to those of the base year, and the less relevant will prices of the base year be for the current period. The usefulness of constant price estimates therefore diminishes as we move away from the base year. The rate of obsolescence depends on the degree of relative price change.

The frequency of rebasing is a compromise between using a more representative reference period and maintaining a stable definition of output for a reasonable length of time. In Canada rebasing has traditionally been done at ten-year intervals: 1961, 1971, and 1981. The rebasing in June 1990 from 1981 prices to 1986 prices is the first time the interval has been reduced to five years. This conforms to the United Nations' recommendations regarding the frequency of rebasing.

que la moyenne, l'évaluation de la production aux prix de la période antérieure résulterait dans une mesure du total du PIB qui s'accroîtrait plus vite que si la production avait été évaluée aux prix de la période plus récente.

L'industrie des ordinateurs présente un exemple digne de mention: on observe une production en plein essor, des changements rapides et progressifs de qualité en même temps que des chutes précipitées des prix au cours des années quatre-vingt. En 1981, l'industrie des ordinateurs comptait à peine pour 0.2% de l'ensemble du PIB et cette proportion demeure relativement la même en prix nominaux entre 1981 et 1986. Toutefois, lorsqu'on évalue la production aux prix de 1981, la contribution de cette industrie au total du PIB monte à 0.7% en 1986. Ceci signifie que les variations en valeurs nominales de la production sont amplifiées avec la déflation, donnant une importance accrue à l'industrie des ordinateurs dans les séries chronologiques en prix constants.

Idéalement, une année de base est une année type, suivie d'un nombre d'années au cours desquelles les prix relatifs de produits demeurent stables. Toutefois, dans une économie dynamique, les prix relatifs varient constamment en raison de facteurs comme des développements technologiques inégaux dans différentes industries, des variations de productivité, des déplacements de la demande des consommateurs, des cycles de la croissance économique, etc. Plus on s'éloigne d'une année de base, plus les prix relatifs de la période courante ont changé et moins les prix de l'année de base seront pertinents durant la période en cours. L'utilité d'estimations en prix constants diminue à mesure qu'on s'éloigne de l'année de base. Le taux de désuétude dépend du degré de variation dans les prix relatifs.

La fréquence du changement de l'année de base fait l'objet d'un compromis entre l'utilisation d'une période de référence plus représentative et le maintien d'une définition stable de la production pour un certain temps. Au Canada, le changement de l'année de base se faisait traditionnellement tous les dix ans: 1961, 1971 et 1981. En juin 1990 on procède à un changement de l'année de base, qui s'établit maintenant à 1986; pour la première fois, on réduit l'intervalle de rebasement à cinq ans, en conformité des recommandations de l'Organisation des Nations Unies sur la fréquence du changement de l'année de base.

Changing to a new base year will cause a discontinuity in GDP by industry if the change is not worked backwards to all preceding periods. There are two alternative approaches for providing continuous constant dollar estimates. In the first, the methodology used for the current period (i.e. from the new base year forward) is simply applied to all preceding periods. In other words, the lowest level components are revalued at 1986 prices, and these are summed to obtain higher level aggregates. In the second method, data prior to the new base year is multiplied by a constant to link them to the new base year. The constant is the ratio of GDP in the new base year evaluated at new and old base year prices. Each series, regardless of level of aggregation, is linked in this way.

Each method has its own merits. The first preserves additivity: the components will sum to the aggregates. However, using current prices to weight the volume of production in the distant past, when technology and social values were different, may not be meaningful. The second method overcomes this problem to a degree: it does not change growth rates in past periods as each series, whether component or aggregate, is scaled by a constant. Since the constants may all be different, however, the components will not necessarily add to the aggregates.

Constant dollar aggregates in the Canadian System of National Accounts are linked using the second method. To demonstrate this procedure consider a GDP-by-industry series from 1961 to 1990. Such a series consists of four segments valued in prices of four different base years:

Period	Base Year	Période	Année de base
1961 - 1970	1961	1961 - 1970	1961
1971 - 1980	1971	1971 - 1980	1971
1981 - 1985	1981	1981 - 1985	1981
1986 - present	1986	1986 - présent	1986

L'adoption d'une nouvelle année de base cause une discontinuité dans le PIB par industrie si le changement n'est pas répercuté sur toutes les années antérieures. Il existe deux approches de façon à assurer la continuité des estimations en dollars constants. Dans la première, la méthodologie utilisée pour la période courante (i.e. à compter de la nouvelle année de base et les années suivantes) est simplement appliquée à toutes les périodes précédentes. En d'autres mots, les composantes de niveau inférieure sont réévaluées aux prix de 1986 et agrégées de façon à obtenir des agrégats de niveau supérieur. Dans la seconde approche, les données pour les années qui précèdent la nouvelle année de base sont multipliées par une constante de façon à les raccorder à la nouvelle année de base. Cette constante est le rapport du PIB dans la nouvelle année de base évalué aux prix de la nouvelle et de l'ancienne année de base. Chaque série, peu importe le niveau d'agrégation, est raccordée de cette façon.

Chaque méthode a ses propres avantages. La première conserve l'additivité: les composantes s'additionnent aux totaux. Cependant, l'utilisation de prix courants comme facteurs de pondération du volume de production d'une période passée éloignée, caractérisée par une technologie et des valeurs sociales différentes, peut ne pas être significatif. La seconde méthode surmonte ce problème dans une certaine mesure; elle permet de conserver les taux de croissance des périodes antérieures puisque chaque série, qu'il s'agisse d'une composante ou d'un agrégat, est multipliée par une constante. Étant donné que des constantes peuvent avoir chacune une valeur différente, la somme des composantes peut ne pas coïncider avec les agrégats.

Les agrégats en dollars constants pour le Système canadien des comptes nationaux sont raccordés selon la seconde méthode. Afin d'illustrer cette procédure, considérons une série chronologique du PIB par industrie pour les années 1961 à 1990. Cette série recoupe quatre périodes pour lesquelles les mesures sont évaluées aux prix de quatre années de base différentes:

Because the series consists of four base year segments, the linking is a multistep process. First, the 1961 based data is linked to the 1971 based estimates. The resulting series is then linked to the 1981 based figures, and finally, this is linked to the 1986 based estimates.

Since this method does not preserve additivity of the constant price estimates, the figures in this publication are not suitable for calculating industry contributions to total GDP. For this purpose analysts are advised to use the annual estimates of value added in current prices as published in **The Input-Output Structure of the Canadian Economy**, Catalogue 15-201.

2. Young, Allan, "Estimating Trading Day Variation in Monthly Economic Time Series", U.S. Bureau of the Census, Technical Paper Number 12, 1965.

Parce que les séries chevauchent quatre périodes dont chacune est associée à une année de base différente, le processus de raccordement nécessite plusieurs étapes. D'abord, les données basées sur l'année 1961 sont raccordées aux estimations basées sur l'année 1971. Les résultats de cette opération sont ensuite raccordées aux données basées sur l'année 1981, pour finalement raccorder ces derniers aux estimations basées sur l'année 1986.

Puisque ce mode de raccordement ne permet pas de conserver l'additivité des estimations en termes réels, les chiffres de cette publication ne sont guère propices aux calculs des contributions industrielles à l'ensemble du PIB. À cette fin on recommande aux analystes d'utiliser les estimations annuelles de la valeur ajoutée aux prix courants tels que publiées dans **La structure par entrées-sorties de l'économie canadienne**, no 15-201 au catalogue.

# SNA Industry Codes at the Aggregation Levels Small(S), Medium(M), Link(L)

## Codes des industries du SCN aux niveaux d'agrégation S, M et L

No.	Business sector	Secteur entreprises
1	Agricultural & related services ind	Ind. agricoles & de serv. connexes
1.1	Agricultural & related services ind	Ind. agricoles & de serv. connexes
1.1.1	Agricultural & related services ind	Ind. agricoles & de serv. connexes
2	Fishing & trapping industries	Ind. de la pêche et du piégeage
2.2	Fishing & trapping industries	Ind. de la pêche et du piégeage
2.2.2	Fishing & trapping industries	Ind. de la pêche et du piégeage
3	Logging & forestry industries	Exploitation forestière
3.3	Logging & forestry industries	Exploitation forestière
3.3.3	Logging & forestry industries	Exploitation forestière
4	Mining, quarrying & oil well ind.	Mines, carrières & puits de pétrole
4.4	Mining industries	Industries des mines
4.4.4	Gold mines	Mines d'or
4.4.5	Other metal mines	Autres mines de métaux
4.4.6	Iron mines	Mines de fer
4.4.7	Asbestos mines	Mines d'amiante
4.4.8	Non-metal mines ex coal & asbestos	Mines non métal. ex charbon amiante
4.4.9	Salt mines	Mines de sel
4.4.10	Coal mines	Mines de charbon
4.5	Crude petroleum & natural gas	Pétrole brut & gaz naturel
4.5.11	Crude petroleum & natural gas	Pétrole brut & gaz naturel
4.6	Quarry & sand pit industries	Carrières & sablières
4.6.12	Quarry & sand pit industries	Carrières & sablières
4.7	Service related to mineral extract.	Industries des services miniers
4.7.13	Service related to mineral extract.	Industries des services miniers
5	Manufacturing industries	Industries manufacturières
5.8	Food industries	Industries des aliments
5.8.14	Meat & meat products (exc. poultry)	Viande sauf volaille
5.8.15	Poultry products industry	Industrie de la volaille
5.8.16	Fish products industry	Transformation du poisson
5.8.17	Fruit and vegetable industries	Industries des fruits & légumes
5.8.18	Dairy products industries	Industries laitières
5.8.19	Feed industry	Industrie des aliments pour animaux
5.8.20	Vegetable oil mills (exc. corn oil)	Huiles végétales (sauf de maïs)
5.8.21	Biscuit industry	Industrie des biscuits
5.8.22	Bread & other bakery products ind.	Pain & autres prod. de boulangerie
5.8.23	Cane & beet sugar industry	Sucre de canne & de betterave
5.8.24	Misc. food products industries	Produits alimentaires divers
5.9	Beverage industries	Industries des boissons
5.9.25	Soft drink industry	Industrie des boissons gazeuses
5.9.26	Distillery products industry	Ind. des produits de distillation
5.9.27	Brewery products industry	Industrie de la bière
5.9.28	Wine industry	Industrie du vin
5.10	Tobacco products industries	Industries du tabac
5.10.29	Tobacco products industries	Industries du tabac
5.11	Rubber products industries	Ind. des produits en caoutchouc
5.11.30	Rubber products industries	Ind. des produits en caoutchouc
5.12	Plastic products industries	Produits en matière plastique
5.12.31	Plastic products industries	Produits en matière plastique
5.13	Leather & allied products ind.	Ind. du cuir & produits connexes
5.13.32	Leather tanneries	Tanneries
5.13.33	Footwear industry	Industrie de la chaussure
5.13.34	Misc. leather & allied prod. ind.	Ind. des produits divers en cuir
5.14	Primary textile & textile prod. ind	Ind. textiles & produits textiles
5.14.35	Man-made fibre yarn & woven cloth	Fibres chimiques & tissus tissés
5.14.36	Wool yarn & woven cloth industry	Filature & tissage de la laine
5.14.37	Broad knitted fabric industry	Ind. des tissus larges à maille
5.14.38	Misc. textile products industries	Ind. des produits textiles divers
5.14.39	Contract textile dyeing & finishing	Teinture & finissage prod. textiles
5.14.40	Carpet, mat & rug industry	Tapis, carpettes & moquettes
5.15	Clothing industries	Industries de l'habillement
5.15.41	Clothing industries exc. hosiery	Ind. de l'habillement sauf bas
5.15.42	Hosiery industry	Industrie des bas & chaussettes
5.16	Wood industries	Industries du bois
5.16.43	Sawmills, planing & shingle mills	Scieries, rabotage & bardeaux
5.16.44	Veneer and plywood industries	Ind. des placages & contreplaqués

# SNA Industry Codes at the Aggregation Levels Small(S), Medium(M), Link(L) – Continued

## Codes des industries du SCN aux niveaux d'agrégation S, M et L – suite

No.	Business sector – Continued	Secteur entreprises – suite
5.16.45	Sash, door & other millwork ind.	Portes, châssis, autres bois ouvrés
5.16.46	Wooden box & coffin industries	Ind. des boîtes & des cercueils
5.16.47	Other wood industries	Autres industries du bois
5.17	Furniture & fixture industries	Meubles & articles d'ameublement
5.17.48	Household furniture industries	Industrie des meubles de maison
5.17.49	Office furniture industries	Industrie des meubles de bureau
5.17.50	Other furniture & fixture ind.	Autres ind. de meubles & articles
5.18	Paper & allied products industries	Ind. du papier & produits connexes
5.18.51	Pulp & paper industries	Industries des pâtes et papier
5.18.52	Asphalt roofing industry	Ind. du papier-toiture asphalte
5.18.53	Paper box & bag industries	Boîtes en carton et sacs en papier
5.18.54	Other converted paper products ind.	Aut. produits en papier transformé
5.19	Printing, publishing & allied ind.	Imprimerie, édition & ind. connexes
5.19.55	Printing & publishing ind.	Imprimerie & édition
5.19.56	Platemaking, typesetting & bindery	Clichage, composition & reliure
5.20	Primary metal industries	Première transformation des métaux
5.20.57	Primary steel industries	Industries sidérurgiques
5.20.58	Steel pipe & tube industry	Ind. des tubes & tuyaux d'acier
5.20.59	Iron foundries	Fonderies de fer
5.20.60	Non-ferrous smelting & refining ind	Fonte & affinage métaux non ferreux
5.20.61	Aluminum rolling casting, extruding	Laminage & moulage de l'aluminium
5.20.62	Copper rolling casting & extruding	Laminage, moulage, ext. du cuivre
5.20.63	Other metal rolling, casting etc.	Laminage & moulage d'autres métaux
5.21	Fabricated metal product industries	Fabrication des produits en métal
5.21.64	Power boiler & struct. metal ind.	Chaudières & éléments de charpente
5.21.65	Ornamental & arch. metal prod. ind.	Produits d'architecture en métal
5.21.66	Stamped, pressed & coated metals	Emboutissage & matriçage des métaux
5.21.67	Wire and wire products industries	Fil métallique & ses produits
5.21.68	Hardware, tool & cutlery industries	Articles de quincaillerie
5.21.69	Heating equipment industry	Industrie du matériel de chauffage
5.21.70	Machine shops industry	Ateliers d'usinage
5.21.71	Other metal fabricating industries	Autres ind. de produits en métal
5.22	Machinery industries	Industries de la machinerie
5.22.72	Agriculture implement industry	Industrie des instruments aratoires
5.22.73	Commercial refrigeration equipment	Équip. commercial de réfrigération
5.22.74	Other machinery & equipment ind.	Autre machinerie & équipement
5.23	Transportation equipment industries	Industries du matériel de transport
5.23.75	Aircraft & aircraft parts industry	Ind. d'aéronefs & pièces d'aéronefs
5.23.76	Motor vehicle industry	Industrie des véhicules automobiles
5.23.77	Truck, bus body & trailer industry	Carrosseries de camions & remorques
5.23.78	Motor vehicle parts & accessories	Pièces & accessoires pour véhicules
5.23.79	Railroad rolling stock industry	Ind. du matériel ferroviaire roulant
5.23.80	Shipbuilding and repair industry	Construction, réparation de navire
5.23.81	Misc. transportation equipment ind.	Ind. diverses du matériel transport
5.24	Electrical & electronic products	Prod. électriques & électroniques
5.24.82	Small electrical appliance industry	Petits appareils électriques
5.24.83	Major appliances (elec & non-elec.)	Gros appareils (électriques ou non)
5.24.84	Record players, radio & tv receiver	Phonographes, récepteurs radio & tv
5.24.85	Electronic equipment industries	Industrie du matériel électronique
5.24.86	Office, store & business machines	Ordinateurs & autre mach. de bureau
5.24.87	Communications, energy wire & cable	Fils & câbles, élect./communication
5.24.88	Battery industry	Industrie des accumulateurs
5.24.89	Other elect. & electronic products	Autres prod. élect. & électroniques
5.25	Non-metallic mineral products ind.	Produits minéraux non métalliques
5.25.90	Clay products industry	Industrie des produits en argile
5.25.91	Cement industry	Industrie du ciment
5.25.92	Concrete products industry	Industries des produits en béton
5.25.93	Ready-mix concrete industry	Industrie du béton préparé
5.25.94	Glass & glass products industries	Verre & articles en verre
5.25.95	Non-metallic mineral products nec	Produits minéraux non métal. nca
5.26	Refined petroleum & coal products	Prods raffinés de pétrole & charbon
5.26.96	Refined petroleum & coal products	Prods raffinés de pétrole & charbon
5.27	Chemical & chemical products ind.	Industries chimiques
5.27.97	Industrial chemicals industries nec	Prods chimiques d'usage indust. nca

**SNA Industry Codes at the Aggregation Levels Small(S), Medium(M), Link(L) – Continued**
**Codes des industries du SCN aux niveaux d'agrégation S, M et L – suite**

No.	Business sector – Continued	Secteur entreprises – suite
5.27.98	Plastic & synthetic resin industry	Mat. plastique & résine synthétique
5.27.99	Pharmaceutical & medicine industry	Prod. pharmaceutiques & médicaments
5.27.100	Paint and varnish industry	Industrie des peintures & vernis
5.27.101	Soap & cleaning compounds industry	Savons & composés de nettoyage
5.27.102	Toilet preparations industry	Industrie des produits de toilette
5.27.103	Chemical & chemical products nec	Industries chimiques nca
5.28	Other manufacturing industries	Autres industries manufacturières
5.28.104	Jewellery & precious metal ind.	Bijouterie & orfèvrerie
5.28.105	Sporting goods & toy industries	Ind. des articles de sport & jouets
5.28.106	Sign and display industry	Industrie des enseignes & étalages
5.28.107	Floor tile, linoleum, coated fabric	Dalles, linoleum & tissus enduits
5.28.108	Other manufacturing industries nec	Aut. industries manufacturières n.c.a.
6	Construction industries	Industries de la construction
6.29	Construction industries	Industries de la construction
6.29.109	Repair construction	Réparation (construction)
6.29.110	Residential construction	Construction domiciliaire
6.29.111	Non-residential bldg. construction	Bâtiments autres que domiciliaires
6.29.112	Road, highway & airstrip const.	Const. routes & pistes d'atter.
6.29.113	Gas & oil facility construction	Const. inst. gazif. & pétrolif.
6.29.114	Dams & irrigation projects	Barrages & projets d'irrigation
6.29.115	Railway & telephone telegraph const	Const. ch. de fer, télégr. téléphone
6.29.116	Other engineering construction	Autres travaux de génie
6.29.117	Construction, other activities	Construction, autres activités
7	Transportation & storage industries	Ind. du transport et entreposage
7.30	Transportation industries	Industries du transport
7.30.118	Air transport & services incidental	Transp. aérien & services relatifs
7.30.119	Railway transport & rel. services	Transp. ferroviaire & services rel.
7.30.120	Water transport & rel. services	Transport par eau & services rel.
7.30.121	Truck transport industries	Industries du camionnage
7.30.122	Urban transit system industry	Ind. du transport en commun urbain
7.30.123	Interurban & rural transit systems	Transp. en commun interurbain/rural
7.30.124	Taxicab industry	Industrie du taxi
7.30.125	Other transport & serv. to transp.	Aut. ind. & serv. rel. aux transp.
7.30.126	Highway & bridge maintenance ind.	Entretien des routes, rues & ponts
7.31	Pipeline transport industries	Ind. du transport par pipelines
7.31.127	Pipeline transport industries	Ind. du transport par pipelines
7.32	Storage & warehousing industries	Ind. d'entreposage & d'emmagasiner
7.32.128	Storage and warehousing industries	Ind. d'entreposage & d'emmagasiner
8	Communication industries	Industries des communications
8.33	Communication industries	Industries des communications
8.33.129	Telecommunication broadcasting ind.	Ind. de la diffusion des télécom.
8.33.130	Telecommunication carriers & other	Télécommunications transmission/aut.
8.33.131	Postal service industry	Industrie des services postaux
9	Other utility industries	Aut. industries de services publics
9.34	Other utility industries	Aut. industries de services publics
9.34.132	Electric power systems industry	Industrie de l'énergie électrique
9.34.133	Gas distribution systems industry	Industrie de la distribution de gaz
9.34.134	Other utility industries nec	Autres ind. de services publics nca
10	Wholesale trade industries	Industries du commerce de gros
10.35	Wholesale trade industries	Industries du commerce de gros
10.35.135	Wholesale trade industries	Industries du commerce de gros
11	Retail trade industries	Industries du commerce de détail
11.36	Retail trade industries	Industries du commerce de détail
11.36.136	Retail trade industries	Industries du commerce de détail
12	Finance insurance & real est. ind.	Finances, ass. & aff. immobilières
12.37	Finance & real estate industries	Ind. financières et immobilières
12.37.137	Banks, credit union & oth. dep inst	Banques, caisses d'épargne aut. inst.
12.37.138	Trust, other finance & real estate	Soc. fiducie aut. agents fin. immob.
12.38	Insurance industries	Industries des assurances
12.38.139	Insurance industries	Industries des assurances
12.39	Govt. royalties on nat. resources	Redevances gouv. sur ressources nat
12.39.140	Govt. royalties on nat. resources	Redevances gouv. sur ressources nat
12.40	Owner occupied dwellings	Immeubles occupés par propriétaire

# No other monthly report on the Canadian Economy has this much to offer

## Canadian Economic Observer

The most extensive and timely information source for people who want objective facts and analysis on the Canadian Economy... every month.

## Current economic conditions

Brief, "to the point" a current update summary of the economy's performance including trend analyses on employment, output, demand and the leading indicator.

## Feature articles

In-depth research on current business and economic issues: business cycles, employment trends, personal savings, business investment plans and corporate concentration.

## Statistical summary

Statistical tables, charts and graphs cover national accounts, output, demand, trade, labour and financial markets.

## Regional analysis

Provincial breakdowns of key economic indicators.

## International overview

Digest of economic performance of Canada's most important trading partners — Europe, Japan and the U.S.

## Economic and statistical events

Each month, CEO also publishes a chronology of current events that will affect the economy, and information notes about new products from Statistics Canada.

## Consult with an expert

The names and phone numbers of the most appropriate Statistics Canada contacts are provided with each data table in the statistical summary; not only can you read the data and the analysis, you can talk to the experts about it.

## The Canadian Economic Observer

(Catalogue no. 11-010) is \$220 annually in Canada, US\$260 in the United States and US\$310 in other countries.

To order, write Publication Sales, Statistics Canada, Ottawa, Ontario, K1A 0T6 or contact the nearest Statistics Canada Regional Reference Centre listed in this publication.

For faster service, fax your order to 1-613-951-1584. Or call toll free at 1-800-267-6677 and use your VISA or MasterCard.

# La seule publication à vous offrir autant d'information sur l'économie canadienne

## L'Observateur économique canadien

La revue la plus complète et la plus à jour qui soit pour les gens qui désirent des renseignements objectifs et une analyse de l'économie canadienne... chaque mois.

## Les conditions économiques actuelles

Résumé bref et incisif de l'actualité économique du mois, comportant l'analyse des tendances de l'emploi, de la production, de la demande et de l'indicateur avancé.

## Les études spéciales

Recherche approfondie sur les questions du domaine des affaires et de l'économie : cycles économiques, tendances de l'emploi, épargne personnelle, projets d'investissement et concentration des sociétés.

## L'aperçu statistique

Tableaux, graphiques et diagrammes englobant les statistiques des comptes nationaux, de la production, de la demande, du commerce, de l'emploi et des marchés financiers.

## L'analyse régionale

Ventilation par province des indicateurs économiques stratégiques.

## Le survol de l'économie internationale

Un sommaire du rendement de l'économie des partenaires commerciaux du Canada, comme l'Europe, le Japon et les États-Unis.

## Événements économiques et statistiques

Chaque mois, L'OEC publie une chronologie des événements qui influenceront l'économie de même que des renseignements sur les nouveaux produits de Statistique Canada.

## Consultez un expert

Les noms et numéros de téléphone des personnes-ressources figurent à chaque tableau de l'aperçu statistique; non seulement pouvez-vous lire les données et l'analyse, mais vous pouvez de plus discuter du sujet avec les experts de Statistique Canada.

## L'Observateur économique canadien.

(n° 11-010 au catalogue) coûte 220 \$ l'abonnement annuel au Canada, 260 \$ US aux États-Unis et 310 \$ US dans les autres pays.

# THE MARKET RESEARCH HANDBOOK 1990

*The fastest way to get  
off to a good start!*

Brainstorming with your colleagues produces some great marketing ideas. But which ones will you use? The **Market Research Handbook 1990** can help you narrow your options before you commit anymore time and resources to developing your strategy.

This handbook is the most comprehensive statistical compendium on Canadian consumers and the businesses that serve them. It helps you to identify, define and locate your target markets.

## **Looking for...**

...socio-economic and demographic profiles of 46 urban areas?

...revenue and expenditure data for retailers and small businesses?

The **Market Research Handbook 1990** has it all... and more. It provides information on:

- personal spending
- size and composition of households
- wages and salaries
- investment in Canadian industries
- labour force in various industries
- industry and consumer prices

It has been one of our bestsellers since 1977 for the simple reason that it offers such a range and depth of market data. Save time and money when you're looking for data or finding data sources, keep the **Market Research Handbook 1990** close at hand for easy reference.

The **Market Research Handbook 1990** (Cat. no. 63-224) is \$89 in Canada and US\$107 outside Canada.

To order, write to Publication Sales, Statistics Canada, Ottawa, Ontario, K1A 0T6 or contact the nearest Statistics Canada Reference Centre listed in this publication.

For faster service fax your order to 1-613-951-1584. Or call toll-free 1-800-267-6677 and use your VISA or MasterCard.

# LE RECUEIL STATISTIQUE DES ÉTUDES DE MARCHÉ 1990

*Pour partir  
du bon pied!*

Des séances de remue-méninges jaillissent d'excellentes idées de commercialisation. Mais lesquelles choisir? Le **Recueil**

**statistique des études de marché 1990** peut vous faciliter les choix avant que vous n'engagiez plus de temps et de ressources à l'élaboration de votre stratégie.

Ce recueil statistique est le plus exhaustif qui soit sur les consommateurs canadiens et les entreprises qui les servent. Il vous aide à définir et situer vos marchés cibles.

## **Vous cherchez...**

...des profils socio-économiques et démographiques de 46 régions urbaines?

...des données sur les recettes et les dépenses de détaillants et de petites entreprises?

Le **Recueil** contient tout cela... et plus encore:

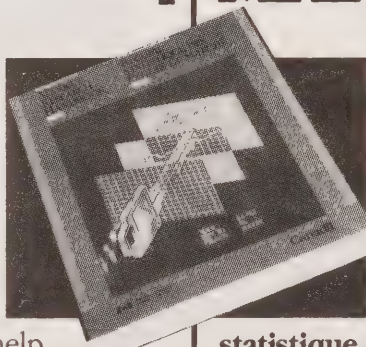

- dépenses personnelles
- taille et composition des ménages
- traitements et salaires
- investissements par secteur d'activité économique
- population active par secteur d'activité
- prix de l'industrie et de la consommation

Si c'est l'un de nos succès depuis 1977, c'est parce qu'il renseigne en long et en large sur le marché. Pour économiser temps et argent, vous ne sauriez vous en passer.

Le **Recueil statistique des études de marché 1990** (n° 63-224 au catalogue) coûte 89 \$ au Canada et 107 \$ US à l'étranger.

Pour commander, veuillez écrire à Vente des publications, Statistique Canada, Ottawa (Ontario), K1A 0T6 ou communiquer avec le Centre de consultation de Statistique Canada le plus près (voir la liste figurant dans la présente publication).

Pour un service plus rapide, commandez par télécopieur au 1-613-951-1584. Ou composez sans frais le 1-800-267-6677 et utilisez votre carte VISA ou MasterCard.

## What happened to the cost of living last month?

**T**he Consumer Price Index will tell you.

Whether you negotiate wage settlements, administer COLA clauses in labour contracts, assess government policies or are involved in renewal contracts, child support or alimony payments, you need current and detailed information on changes in the cost of living.

Compiled monthly (and published within 20 days of the month's end), **The Consumer Price Index** gives you a precise account of the latest fluctuations in consumer prices.

This monthly publication covers:

- transportation
- health and personal care
- food
- recreation, reading and education
- clothing
- tobacco products and alcoholic beverages
- housing

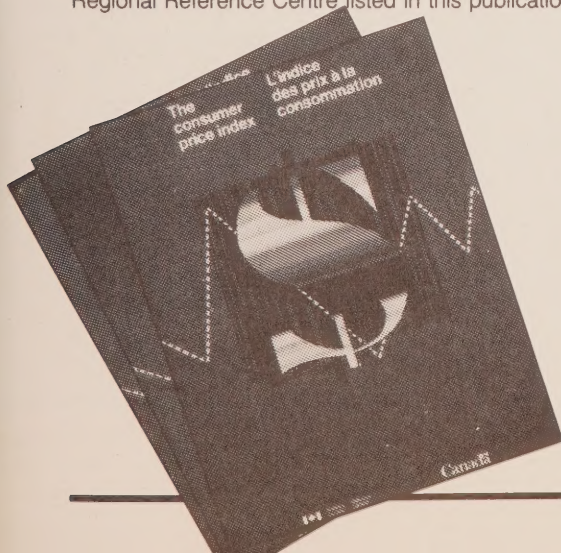

Over 400 items, ranging from milk to parking, household furnishings to reading material, are included.

Price indexes are presented nationally and for 18 major Canadian cities. In each issue you receive month-to-month percentage comparisons and trends over the last five years. And each issue analyzes the main causes of change.

*Get the facts.*

Subscribe to **The Consumer Price Index** (Catalogue No. 62-001) for the authoritative measure of the purchasing power of the Canadian consumer dollar. A subscription to this monthly is available for \$93 in Canada, US\$112 in the United States and US\$130 in other countries.

To order, write Publication Sales, Statistics Canada, Ottawa, Ontario, K1A 0T6, or contact the nearest Statistics Canada Regional Reference Centre listed in this publication.

## Qu'en était-il du coût de la vie le mois dernier ?

**L'**indice des prix à la consommation répond à votre question.

Que vous ayez à négocier des règlements salariaux, à administrer des clauses d'indemnité de vie chère ou à évaluer des politiques gouvernementales, que vous vous occupiez du renouvellement de contrats, de pensions alimentaires ou d'allocations d'entretien, vous avez besoin de données récentes et détaillées sur les fluctuations du coût de la vie.

Établi mensuellement, et publié dans les 20 jours suivant la fin de chaque mois, **L'indice des prix à la consommation** vous renseigne de façon précise sur les plus récentes fluctuations des prix à la consommation.

Cette publication mensuelle porte sur:

- l'alimentation
- l'habillement
- l'habitation
- le transport
- la santé et les soins personnels
- les loisirs, la lecture et la formation
- les produits du tabac et les boissons alcoolisées

Plus de 400 articles sont inclus, allant du lait au stationnement en passant par l'ameublement de maison et le matériel de lecture.

Les indices de prix sont donnés pour l'ensemble du pays et 18 principales villes canadiennes. Chaque numéro présente des comparaisons des pourcentages mois après mois et les tendances au cours des cinq dernières années. En outre, chaque numéro analyse les principales causes de changement.

*Abonnez-vous !*

**L'indice des prix à la consommation** (n° 62-001 au catalogue) vous permet d'obtenir une évaluation fiable du pouvoir d'achat du dollar canadien. L'abonnement à cette publication mensuelle coûte 93 \$ au Canada, 112 \$ US aux États-Unis et 130 \$ US dans les autres pays.

Pour commander, veuillez écrire à Vente des publications, Statistique Canada, Ottawa (Ontario), K1A 0T6 ou communiquer avec le Centre régional de consultation de Statistique Canada le plus près (voir la liste figurant dans la présente publication).

# CHOISISSEZ UN SUJET... N'IMPORTE LEQUEL

**N**ow a redesigned Statistics Canada Catalogue will simplify your search for the most up-to-date or historic facts. An expanded and improved keyword index, cross-referencing, increased subject detail and listings by geographical area provide easy access to hundreds of Statistics Canada products and services.

- ☐ Know the topic but not the "official title"? No matter how wide or narrow the topic – or how little you know about it – you'll appreciate how quickly the cross-referencing leads you to the right source.
- ☐ You'll find sources of key statistics like consumer price indexes, import/export figures, or population characteristics down to the village level. From the most popular topics of the day like employment, income, trade and education to more detailed research studies like mineral products shipped from Canadian ports or Caribbean immigrants in urban areas... you'll find it all.
- ☐ This expanded edition of the **Statistics Canada Catalogue** includes descriptions of our full range of services – from publications and maps to microdata files and diskettes. And, many of our electronic product listings include the name and phone number of a contact within Statistics Canada giving you a direct line to more detailed information.
- ☐ As always, you'll find sections on how to get more help... on-line search techniques in libraries... discount and order information... and the locations of our Reference Centres. You'll especially appreciate that this year's **Catalogue** is bound in a durable, plasticized cover to withstand intensive use.
- ☐ For ease and completeness in your information search get the **Statistics Canada Catalogue** (cat. # 11-204E) for \$13.95 in Canada, US\$17 in the U.S. and US\$20 in other countries. To order your copy write to Publication Sales, Statistics Canada, Ottawa, Ontario, K1A 0T6 or you can FAX your order to (613) 951-1584. For faster service using VISA or MasterCard, call toll-free:

**D**orénavant le Catalogue de Statistique Canada amélioré simplifiera vos recherches de données récentes ou historiques. Son index revu et augmenté comprend des renvois, des sujets plus détaillés et des références géographiques vous permettant d'accéder rapidement à des centaines de produits et de services de Statistique Canada.

- ☐ Vous connaissez le sujet sans connaître le terme technique? Peu importe si le sujet est général ou spécifique, vous apprécierez l'accès rapide que vous procure les renvois.
- ☐ Vous repérerez facilement les sources de statistiques essentielles comme l'indice des prix à la consommation, les importations – exportations ou encore, les caractéristiques de la population jusqu'à l'échelle des villages. Des sujets populaires du jour tels l'emploi, le revenu, le commerce et l'éducation jusqu'aux études plus spécifiques comme les produits minéraux expédiés à partir des ports canadiens ou les immigrants antillais dans les régions urbaines, vous trouverez tout!
- ☐ L'édition augmentée du **Catalogue de Statistique Canada** contient bien plus encore. Elle présente en détail notre gamme complète de services, depuis les publications et les cartes jusqu'aux disquettes et fichiers de microdonnées. Plusieurs descriptions de nos produits informatiques incluent le numéro de la personne-ressource à Statistique Canada. Vous obtenez donc une voie plus directe avec le service de votre choix.
- ☐ Comme toujours, le catalogue contient des sections concernant la façon d'obtenir de l'assistance, les recherches bibliographiques automatisées, les réductions offertes, le guide de commande et l'adresse de nos centres régionaux de consultation. Par ailleurs, vous serez heureux d'apprendre que, cette année, la couverture du catalogue est plastifiée pour résister à un usage fréquent.
- ☐ Pour obtenir rapidement la source d'information la plus complète qui soit concernant nos produits, procurez-vous le **Catalogue de Statistique Canada** (n° 11-204F au catalogue) au prix de 13,95 \$ au Canada, 17 \$ US aux États-Unis et 20 \$ US dans les autres pays. Pour commander votre exemplaire, écrivez à Vente des publications, Statistique Canada, Ottawa (Ontario), K1A 0T6, télécopiez votre commande au 1-613-951-1584 ou utilisez votre carte VISA ou MasterCard et composez le numéro sans frais :
